Creative track rubric

Each judge scores every axis 1 to 5; the weighted sum out of 100 decides.

Format

- 3 minutes demo on the robot (live preferred; a video is capped at 3 on Demo quality), then 2 minutes of questions.
- Judges walk the creative stations Sunday (see the schedule); teams stay at their station for their slot. Top 5 present 5 min each, before awards.

Axes and weights

Axis	Weight	1	3	5
Originality	25	Fruit in bowl	A known task with a new angle	Something nobody in the room had seen a robot do
Technical difficulty	20	Single pick and place	Multi-step, one object class	Long horizon, deformables, tools, or bimanual coordination
Robustness	25	Worked once, with help	Works most of the time	Almost always works
Demo quality	20	Doesn't work	Ran live with some issues	Ran live first time, clear, under 3 minutes
Presentation	10	Hard to follow what was built	Clear problem and result	Clear problem, result, what failed, and what you would do next

Total = sum of (score x weight) / 5, so 100 is the maximum.

Rules

- Hardware or software not available to every team (an extra sensor bought/brought) is allowed but noted; judges may discount Technical difficulty for it.
